

# CLIMAX Precision Machined Shaft Collars

# INDUSTRY *Update*

Shaft collars are often sold as companion products for bearings. Bearings are commonly found in conveyor applications similar to the agricultural conveyor shown. Premature bearing failure is often a result of inferior shaft collars with poor face-to-bore perpendicularity. CLIMAX Two-Piece Shaft Collars are precision machined using a “perpendicular face-to-bore” procedure. If your customer uses bearings offer CLIMAX Two-Piece Shaft Collars for their bearing applications.

Poor Face-to-Bore Perpendicularity
