

Keyless Locking Devices Help Eliminate Downtime

INDUSTRY *Update*

Problem: Drill rig drawworks & similiar large winches and windlasses are subject to extremely high torque and bending loads, leading to equipment downtime due to shaft fatigue failure.

Solution: Climax KLDs eliminate shaft keyways with associated notch factors and stress concentrations. Using a Climax KLD will result in a stronger shaft with a longer service life, eliminating downtime and loss of production caused by shaft failure.
